

DUO-PACK FOAM LAMINATED

Dual protection for your products

PARTICULARLY SURFACE-FRIENDLY

DUO-Pack foam laminated is a light and durable combination of cushioning corrugated cardboard and PE or PU foam that protects surfaces. While PE foam, which repels water, is particularly suitable for scratch-sensitive surfaces, PU foam exhibits a high level of anti-slip properties.

We produce DUO-Pack as B and E-roll or in the DUO-Pack XL version as a combined double wall board (BE-roll) with uniform or individual creasing.

Use of this corrugated cardboard is especially popular in the timber processing industry and by furniture manufacturers. It is ideal for protecting kitchen and living room furniture with painted or coated surfaces. DUO-Pack is used here primarily for outer packaging and repackaging and, in the case of double-sided foam lamination, as an intermediate layer.

On the roll, DUO-Pack is the ideal basic material for the "box off the roll" that you can produce individually on site on our packaging machines.

- Roll width: up to 2,400 mm
- Different standard qualities
- Available as B and E-roll
- Uniform or individual creasing
- Pre-cut sheets possible
- Basic material for VariPack ("box off the roll")
