

PALFIX® NON-SLIP PAPER

Load security & surface protection

ECO-FRIENDLY & SAFE

PalFix® non-slip paper is coated on both sides, particularly good at repelling water and extremely effective when it comes to preventing slipping. As an intermediate layer, its extremely high sliding friction coefficient stabilises products stacked on pallets up to an inclination of 50°. This effectively prevents displacement and slipping of goods in the event of pallet movements.

PalFix® simultaneously provides reliable surface protection against scratching and damage (e.g. by pallet nails) during transportation of particularly sensitive surfaces. In addition to facilitating in-house processes and aiding the avoidance of transportation damage, PalFix® non-slip paper also enables the achievement of savings, as it is cost-effective and can be used several times.

PalFix® is extremely environmentally friendly, as it is based on recycled materials and itself 100% recyclable. It can also be used where necessary with packaging systems from Sprick.

palFix®

- PalFix® as standard pallet format with 110 g/m²
- Other qualities, formats and rolls available on request
- Coated on both sides
- Particularly effective at repelling water
