

# SPEEDMAN® WHEEL

For speedy, uncomplicated paper coils

The SpeedMan® Wheel is an ideal addition to the SpeedMan® Classic paper filling system with which extremely sturdy paper coils can be wound with speed. Operation is intuitive and, when compared to manual twisting of paper coils, effortless and extremely easy.

Paper coils are particularly suitable for shipping heavy products and represent an environmentally friendly and flexible alternative to polystyrene and PU foam solutions, even where small quantities are involved. Costly and cumbersome winding systems can be dispensed with as a result.

The SpeedMan® Wheel is a maintenance-free solution that requires no electric power. Two mounting options are available – a table frame with a pivot arm or a roll frame. Compact and ergonomic, the SpeedMan® Wheel can therefore be integrated with ease in the existing packing station.

## Technical data

- Diameter: 391 mm
- Depth: 345 mm
- Paper: 70 g/90 g SpeedMan® roll
