

# EDGE PROTECTION

## Customised U-profile/L-profile

### TAILORED SOLID & CORRUGATED BOARD SOLUTION

Tailored product protection for delicate edges of all kinds, available in U and L-profiles. **Multilayered corrugated cardboard** (cushioning) combined with paper or PE foam on the inside provides optimum padding and, simultaneously, ensures ideal surface protection. Our U-profiles and L-profiles are supplied to customised specifications and precision. They can be used to protect edges of every kind, including worktops, doors, delicate tops and corners of furniture. U-profiles provide optimum stability and are ideal for packaging delicate long objects such as rods, strips or rails. The flexible edge protection can be adapted by hand.

Particularly convenient **solid board** edge protection angles also facilitate the safe and problem-free transportation of freight. Regardless of the fixing method employed (strapping, stretching, shrinking, inside or outside), edge protection angles protect your goods against damage, deformation or slipping. You can also obtain our solid board edge protection in a variety of lengths, strengths and side dimensions and with adhesion properties – even in small quantities.

- U and L-profiles with individual widths and side heights
- Multilayered corrugated cardboard (applies to cushioning, not to sides): paper and foam laminated
- Standard length 2,400 mm
- 4-layer cushioning
- With “clamping effect”
